

Create two tables as follows:

- (1) **student_info** which contains the columns Roll_number(auto generate), Name, Stream(should be taken values from subject_stream), Semester, Address and Photo.
- (2) **subject_stream** which contains the columns stream_code and stream_name.

By creating a web page to accomplish the following tasks.

- Create an interface to insert the student information through details view (Use file upload control to insert Photo and Use dropdown list to select the stream_name).
- Insert a Gridview control to the page and display all the information of **student_info**.
- Using Button control, provide update option only for the fields Name and address. Also provide delete option to remove the records from **student_info**.
